

## How to Use EmailLargeFile.com Service

1. To send a large file via email, you need to

- enter the recipient's email address in the Email To: field,
- click [Add] button, then browse to your file and select it:

**How To Send Large Files**  
quickly and securely

**EmailLargeFile.com** is a free and [secure](#) service for sending big files and documents via the Internet. Most businesses and email providers block attachments in email messages. EmailLargeFile allows you to transfer files and attachments of almost any size to your clients, family, or friends. [more»](#)

Fill out the information below and click **Add File**. Click **Upload** button to start uploading. Once the upload process is complete, emails will be sent to your recipients. The file will be available for download for **7 days** unless chosen otherwise.

**E-mail To:**  (use , or ; to separate emails)

For Email Notifications click [More Options](#), enter Email From and Return Receipt.

doug_home.jpg-80.40KB
-----------------------

**Uploaded 0%**

Total Files: 1 Total Size: 80.40KB

**Uploaded 0% - 0.00 bytes of 80.40KB**

**Add File**

**Clear All**

**Upload!**

*3. click to start!*

2. If you want to receive email notifications, and to be able to delete the file later, you need to

- expand the More Options section, then
- enter your email address into the Email From box:

The screenshot shows a web form for file upload and email notification. At the top, there is an "E-mail To:" field containing "myfriend@email.com" with a note "(use , or ; to separate emails)". Below this is a section for email notifications with the instruction "For Email Notifications click More Options, enter Email From and Return Receipt." A "Less Options" button is present, with a red arrow pointing to it and the text "Expand this section for more options". The "Email From:" field contains "myemail@email.com" and has a "Personalize" checkbox checked, with a red note "set 'reply to'". The "Comment:" field contains "Enjoy the picture!" and has a "Return Receipt" checkbox checked, with a red arrow pointing to it and the text "click this if Return Receipt needed". The "Keep for:" dropdown is set to "7 days". There is a "Password:" field with the note "(make sure you'll remember it)". Below the form is a file upload area showing a file named "doug\_home.jpg-80.40KB" with a progress bar at 0%. There are three buttons: "Add File", "Clear All", and "Upload!". A red arrow points to the "Upload!" button with the text "click to start uploading!".

If you check the Return Receipt box, we will send you a notification message when the file is downloaded by each of the recipients. If you entered 3 recipient emails, you will receive up to 3 separate notification messages.

## Troubleshooting

The most common issue that may happen is that you don't have required software for uploading files. Our service utilizes the Adobe Flash technology for streaming data to our servers. You can download the Adobe Flash free of charge from Adobe web site.

The screenshot shows the same upload interface as above, but with the "More Options" section expanded. A large text box contains the following message in red: "If this box is empty, please download and install Adobe Flash player at <http://get.adobe.com/flashplayer/>".

## Success!

Upon a successful upload, you will be taken to the second page where you will see a link to your file.

If you specified your recipients on the first page, they all will be sent a unique 's'-link which will trigger notifications if used for downloading the file.

The 'd'-link that you see on the success page, is a default link to the file. Using it for downloads does not trigger email notifications. You can manually email this link to any number of people, and they will be able to download the file, however you will never know if they actually downloaded it.

### UPLOAD SUCCESSFUL !

Your file is on its way

File has uploaded **successfully**, and if you included recipients' email addresses, email notifications will be sent momentarily.

There is only one short link generated per file. If you need more links, please use a url shortening service such as <http://wowurl.com> .

We don't email short links automatically. You will need to take down or remember the generated short link if you need it.

*Important:* unlike our unique 'd' or 's'- links, the short link is sequential. That means, it can be guessed by a 3rd party. Please use regular links whenever possible and avoid generating short links for private or important files.
